1.1 Directors Responsibility Statement

Year Ended 31 December 2018

We acknowledge our responsibility for preparing the EC Insurance Company Limited (“ECICL” or “the Company”) SFCR in all material respects in accordance with the Prudential Regulatory Authority (“PRA”) Rules and the Solvency II Regulations.

We are satisfied that:

- throughout the financial year in question, the Company has complied in all material respects with the requirements of the PRA Rules and the Solvency II Regulations as applicable at the level of the Company and
- it is reasonable to believe that the Company has continued to comply subsequently and will continue to comply until 31 December 2019.

On behalf of the Board

Richard Forrest Smith

Director

Date: 26 March 2019

1.0 Executive Summary

The Solvency and Financial Condition Report (“SFCR”) is prepared for ECICL. The SFCR is prepared in accordance with the Solvency II directive and the various regulatory guidelines issued by the PRA and European Insurance and Occupational Pensions Authority (“EIOPA”). The SFCR is for the year ended 31 December 2018.

Markel Capital Holdings Limited (“MCH”) purchased ECICL from its previous owner, EC Insurance Holdings Ltd, on 28 November 2017.

Following the sale of ECICL to MCH, ECICL purchased a loss portfolio transfer (“LPT”) and quota share reinsurance from Markel International Insurance Company Limited (“MIICL”) to transfer the liabilities of the Company to MIICL. The impact of this reinsurance purchase is to ensure that ECICL does not bear any risk on a net basis on business written prior to the sale to MCH or on any future business.

ECICL uses the standard formula to calculate the regulatory solvency capital requirement (“SCR”).

At 31 December 2018, ECICL has Own Funds of £8,839,560 compared to a SCR of £2,531,337. This represents a solvency coverage ratio of 349%.

2.0 Business & Performance

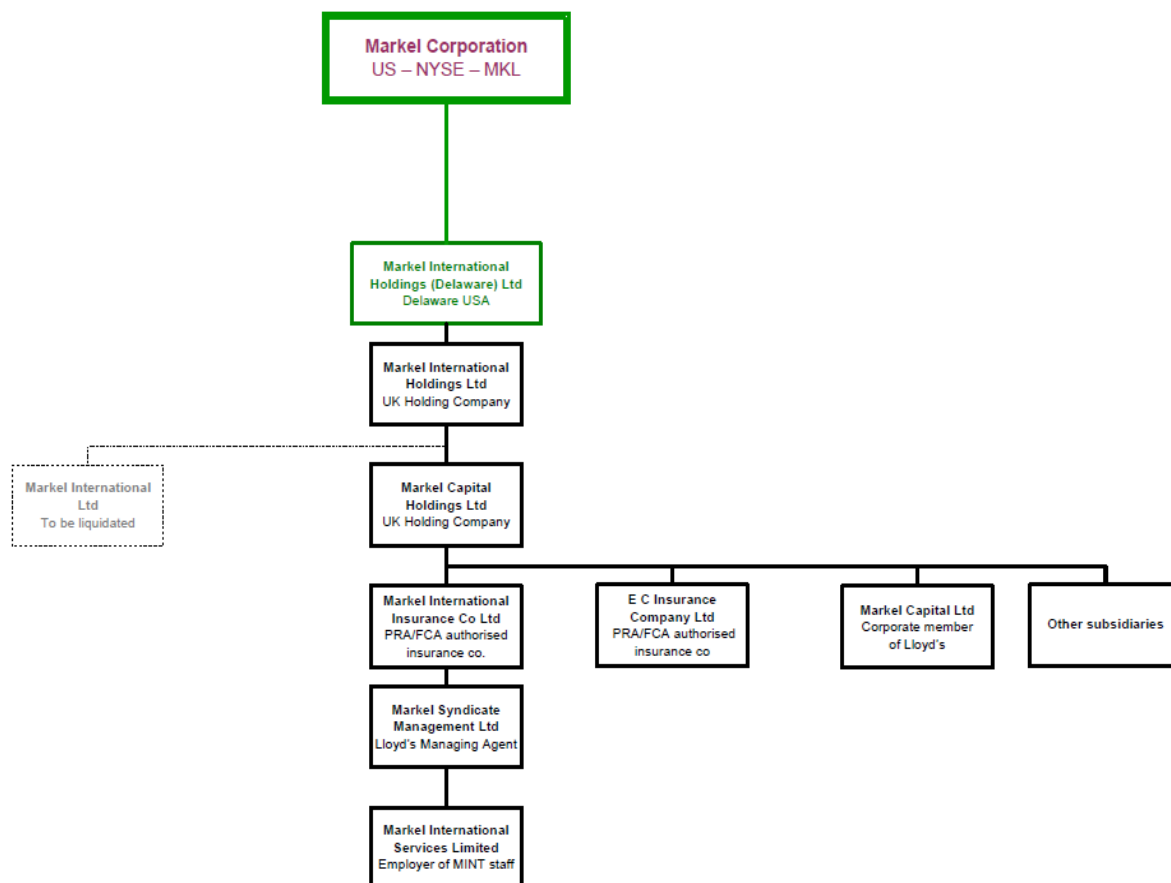

2.1 Company Information

Name	EC Insurance Company Limited 20 Fenchurch Street London EC3M 3AZ
Registered Number	01266206
Supervisory Authorities	Prudential Regulatory Authority, Bank of England, 20 Moorgate, London EC2R 6DA Financial Conduct Authority, 25 the North Colonnade, Canary Wharf, London E14 5HS
External Auditor	KPMG LLP 15 Canada Square, Canary Wharf London E14 5GL
Immediate Parent	Markel Capital Holdings Limited
Ultimate Holding Company	Markel Corporation
Subsidiaries	None

2.2 Group Structure

ECICL is 100% owned by MCH, a company registered in the United Kingdom. The ultimate holding company is Markel Corporation (“Markel”), which is incorporated in Virginia in the United States of America.

The table below sets out a simplified group structure.

2.3 Group Supervision

ECICL is a wholly owned subsidiary of MCH, which is incorporated in the UK. Its ultimate holding company is Markel, which is incorporated in Virginia, USA. ECICL’s ultimate European Economic Area (“EEA”) parent is Markel International Holdings Limited (“MINT”). MINT is the EEA parent of MIICL. The simplified group structure is shown in the table above.

2.4 Business and Environment

ECICL is a specialist UK insurer providing insurance solutions for contractors, construction trade associations and other specialist affinity groups. ECICL has operated for over 40 years in the UK insurance market.

In 2018 ECICL wrote a portfolio of policies for contractors in the electrical, heating, ventilation, air- conditioning, lift and escalator, roofing and building services sector. It also provides insurance schemes for the self-build residential property, mobility products and landlords and

tenants of let property. ECICL underwrote liability, property, accident, sickness, warranty and guarantee business.

The business environment in which ECICL operates remains highly competitive with surplus capacity and pressure on the rates that can be charged for insurance.

All of ECICL business is located in the United Kingdom.

There was a material change in 2018 to the business underwritten by ECICL; the Company ceased to write new business from the 1 October 2018 and the renewal rights for the business were transferred to MIICL. The Company therefore entered run off during 2018 and focuses on ensuring the professional management of its claims liabilities to customers.

2.5 Summary Financial Performance

The summary financial performance for year ended 31 December 2018 is set out below

2018	£
Underwriting Result	Nil
Investment Income	22,180
Profit before Tax	22,180

Following the sale of ECICL to MCH, ECICL entered into a LPT and Renewal Rights Transfer Agreement with MIICL.

Business written by ECICL in 2018 was fully reinsured with MIICL. From 1st October 2018 ECICL ceased to write any business and the renewal rights for the business were transferred to MIICL. ECICL therefore entered run off in 2018 and will focus on ensuring the professional management of its claims liabilities to customers.

2.6 Underwriting Performance

The business has continued to operate in difficult market conditions and a challenging economic environment. Management use a range of performance measures to monitor and manage the business as set out below:

From 1st October 2018 ECICL ceased to write any business and the renewal rights for the business were transferred to MIICL.

Gross Premium Written: Gross written premium for 2018 is £9,357,658. The split by class of business is:

Class of Business	Gross Written Premium
	£
General Liability	3,226,169
Property Damage	3,045,741
Accident and Health	2,498,628
Warranty	378,760
Reinsurance Accepted	208,360
	9,357,658

Gross Loss Ratio: Gross Loss ratio for 2018 is 38% (2017: 69%). The improvement is driven by gross claim reserve reductions in 2018 compared to reserve increases in 2017. Changes in business mix as a result of the Company running off the unexpired policies is the primary driver of the change in loss ratio.

2.7 Investment Performance

During 2018, ECICL's investments comprised solely of cash. ECICL generated investment income of £22,180 for the year ended 31 December 2018, all of which relates to cash on deposits with banks.

2.8 Performance of Other Activities

ECICL does not have any other activities apart from the underwriting and investment activities set out above.

2.9 Any Other Information

In previous years, the Financial Statements have been prepared on a going concern basis. Following the sale of the Company to MCH the Directors took the decision on 1 October 2018 to cease underwriting both renewal and new business. All new business and renewal rights were transferred to MIICL and a plan to Part VII transfer all insurance obligations to MIICL has been approved by the Directors and communicated to the Prudential Regulatory Authority. The Part VII transfer is anticipated to be concluded by Q2 2020. Under FRS102 "an entity is a going concern unless management either intends to liquidate the entity or to cease trading, or has no realistic alternative but to do so." Accordingly, on this basis alone,

the Directors have not prepared the Financial Statements on a going concern basis. The impact of the change in basis of preparation on the Financial Statements is minimal with no change in presentation or values contained within the Income Statement (Technical and Non-Technical Accounts), Statement of Change in Equity, Statement of Financial Position, and notes to the accounts. The non-going concern basis is purely a result of the Company's intention to execute a Part VII transfer in the foreseeable future and the Directors have no concerns over the Company's ability to settle claims. The Company has sufficient assets to cover its liabilities and has no liquidity or capital issues.

There are no other material matters in respect to the business or performance that need to be disclosed.

3.0 System of Governance

3.1 General Information on System of Governance

The Board of ECICL is responsible for prudent oversight of the Company, ensuring that it is conducted in accordance with sound business principles and within applicable law and regulation. This includes responsibility to set and monitor adherence to strategic risk objectives and risk appetite statements. The ECICL Board also ensures that measures are in place to provide effective identification, management and control of risk.

The overall risk strategy for the ECICL Board is to:

- Ensure an effective risk governance framework is in place lead by the Board.
- Anticipate and respond to changing external environment and emerging risks.
- Maintain an appropriately resourced risk management function to assist the business in the identification and mitigation of all material risks.
- Maintain a culture of compliance with applicable laws and regulations.

ECICL achieves corporate governance by maintaining appropriate relationships between its management, its Board, its shareholders and other stakeholders to provide the structure through which ECICL's objectives are set, and the means of attaining those objectives and monitoring performance is determined.

This enables ECICL's Board and management to interact effectively and deliver an agreed strategy and to share a clear understanding of the related risk appetite. It facilitates a robust control framework and allows for an appropriate level of engagement and challenge of the risks and issues as well as the appropriate level of oversight to maintain good governance. The Board ensures that ECICL meets the standards required for Solvency II Firms, as set out in the PRA Handbook, including the "Fundamental Rules" and the FCA handbook, including the "Principles for Business".

The Board has identified the officers who hold each relevant Senior Manager Function (details are held in the Financial Services Register) and has approved the allocation of the Prescribed Responsibilities.

3.2 Board Committees

ECICL's governance arrangements include the following key committees.

Risk and Capital Committee: ECICL forms part of the MIICL Risk and Capital Committee. The purpose of the Risk and Capital Committee is to assist the Board in its oversight of ECICL's risk management strategy and risk management framework. The Risk and Capital Committee has an agreed Terms of Reference which describes the purpose, responsibilities, membership and authority delegated from the Board for the Risk and Capital Committee. Prior to the sale, ECICL formed part of the EC Insurance Holdings Limited Risk and Compliance Committee.

Audit Committee: ECICL forms part of the MIICL Audit Committee. The purpose of the Audit Committee is to assist the Board by overseeing the internal audit function and the relationship with external auditors. The Audit Committee has an agreed Terms of Reference which describes the purpose, responsibilities, membership and authority delegated from the Board to the Audit Committee. Prior to the sale, ECICL formed part of the EC Insurance Holdings Limited Audit Committee.

3.3 Overview of Key Functions

The Company has identified the roles which it considers to be a Key Function performed by a Key Function Holder. All of the Key Function Holders have the necessary authority, resources and operational independence to carry out their roles and responsibilities.

Internal Audit: The main responsibility of the Head of Internal Audit is to provide an independent assessment of the effectiveness and efficiency of risk management, control and governance process within ECICL's business operations. Prior to the sale of ECICL to MCH, the internal audit function was provided by KPMG LLP, which had undertaken this function since 2013.

Risk management: The main responsibility of the Chief Risk Officer is to put in place and maintain effective Enterprise Risk Management comprising strategies, processes and reporting procedures necessary to identify, measure, monitor and report on a continuous basis the risk that the Company is or could be exposed, and their interdependencies.

Compliance: The main responsibility of the Compliance Officer is to enable the Company to meet and exceed the standards required by its regulators. The responsibilities include advising the Board on compliance with the laws, regulations and administrative processes adopted pursuant to Solvency II Directive and other relevant regulatory requirements. In addition, the compliance team assess the possible impact of any significant changes in the legal environment on the operations of ECICL and the adequacy of the measures adopted to prevent non-compliance.

Actuarial: The actuarial function holder is responsible for fulfilling the Company's duties under Solvency II including the calculation of technical provisions and providing opinions on underwriting policy and reinsurance strategy. The actuarial function analyses and projects historical claims development data and use a number of actuarial techniques to validate assumptions used to calculate technical provisions. The actuarial function holder provides an actuarial function report to the Board annually setting out the tasks that have been undertaken by the actuarial function and their results, and any relevant recommendations.

The actuarial function holder is a part of the MINT Group Actuarial function.

3.4 Fit and Proper Requirements

All Directors and employees, whether or not they perform a key function, are recruited on the basis that their professional qualifications, knowledge, experience, management and/or technical competences and experience are adequate to enable sound and prudent management and that they are of good repute and integrity.

Approved Persons are required to be fit and proper persons and ECICL checks regularly that Approved Persons are eligible to perform controlled functions for ECICL under the Senior Manager & Certification Regime (“SMCR”). When assessing whether a person is “proper”, ECICL carries out an assessment of that person’s honesty and financial soundness based on relevant evidence regarding their character, personal behaviour and business conduct including any criminal, financial, supervisory aspects regardless of jurisdiction.

To establish fitness and propriety of an individual to perform an approved function, prior to an individual joining the company and annually thereafter, ECICL looks to see if there are any adverse indicators that would not constitute fitness. ECICL utilises criminal record and financial credit checks as part of this process. In addition, on an ongoing basis, all Approved Persons are required to provide an annual confirmation to notify the Board of any items which might impact on their ability to act as an Approved Person.

3.5 Remuneration Policy

ECICL has a remuneration policy that is agreed by the Board. The objective of the remuneration policy is to:

- Reward, motivate and retain high performing employees at all levels.
- Encourage reliable and continuous performance.
- Establish a strong alignment aimed at delivering outcomes in the interest of the consumer.
- Endorse improvement of the skills of employees, and encourage innovation.
- Support employee retention.
- Incentivise executives to drive sustainable future value within the overall risk objectives.
- Create incentives aligned to longer-term outcomes rather than short- term gains.
- Support an ethical and customer centric culture of the Business.

All employees are remunerated with an annual fixed salary and are entitled to participate in a discretionary bonus scheme, up to specific limits stated in their contracts of employment, depending on seniority. The bonus scheme is flexible, subject to a maximum payment, and

allows zero bonus payments to be made when appropriate. Any payment is subject to both individual and company performance.

3.6 Risk Management including the Own Risk and Solvency Assessment

3.6.1 Risk Management

ECICL recognises that a strong culture of risk management is the key underlying feature of the risk and control process. It also recognises the need to have a risk culture that supports risk based decision-making processes and that risk culture should be embedded within the business.

To facilitate and foster a healthy risk culture ECICL has embedded a risk management system in which colleagues at all levels actively engage in the process of managing risk through discussions at management, staff and risk awareness meetings. ECICL believes this process ensures:

- All material risks are likely to be identified.
- Risk issues can be escalated quickly in the firm.
- Senior management get high quality risk information and on a timely basis.
- The firms risk adjusted metrics (Risk Appetite) can be used to measure and model impacts.
- Delivery of a fair customer outcome and ensure the company operates within the regulatory framework.

3.6.2 Own Risk and Solvency Assessment (“ORSA”)

The ORSA is the entirety of the processes and procedures employed to identify, assess, monitor, manage and report the short and long term risks ECICL faces or may face and to determine the own funds necessary to ensure ECICL’s overall regulatory and economic capital requirements are met at all times.

The ORSA is submitted to the Board of ECICL each year. This process ensures that it is adequately embedded in the strategic decision-making process and management of risk within ECICL. The ORSA report is produced to a level of detail that would enable a suitably knowledgeable external reviewer to be able to gain an understanding of ECICL’s risk and solvency assessment.

The key processes that underpin the ORSA in determining solvency requirements include:

- Stress testing and scenario analysis.
- Business planning and assessment of the key risks to the Plan.
- Forward looking assessments of solvency position.
- Own assessment of solvency based on the standard formula SCR.
- Assessment of the appropriateness of standard formula for regulatory capital setting.

- Risk appetite process.
- Emerging risk process.

3.7 Internal Control System

The management of ECICL is responsible for establishing and maintaining adequate internal controls. ECICL's internal controls cover all aspects of the business.

ECICL assesses and manages internal controls by:

- Identifying what are the significant risks to the business and assessing how they have been evaluated and managed.
- assessing the effectiveness of internal controls in managing significant risks, having regard, in particular, to any material failings or weaknesses that have been reported.
- ensuring action is being taken promptly to remedy any identified failings or weaknesses.
- reviewing and updating its policies to ensure regulatory compliance.
- providing training to employees to ensure they have an appropriate understanding of their responsibilities and obligations from compliance and control perspective.

ECICL's internal control systems encompass policies, processes and tasks that enable ECICL to respond appropriately to significant business, operational, financial, compliance and other risks. The ECICL risk register describes risk controls for each risk and identifies control ownership.

Delegation of tasks and activities is undertaken commensurate with the level of competency required and the skill and experience of the individual. Authority limits and controls are communicated, documented and subject to regular review and change if necessary. Segmentation of duties and function minimises the risk of financial crime. ECICL has a separate risk and compliance function within the organisation managed by suitably competent individuals. The risk and compliance functions has appropriate access to records, individuals and committees.

3.8 Internal Audit Function

ECICL's internal audit function is led by the Head of Internal Audit (SIMF 5).

The internal audit function is an independent and objective assurance and consulting activity designed to add value and improve the ECICL's operations. It assists ECICL in accomplishing its objectives by bringing an independent, systemic and disciplined approach to the process of evaluating and improving the effectiveness of the risk management, control and governance processes. The internal audit function provides an independent assessment of the quality of internal controls and administrative processes, and provides recommendations and suggestions for continuous improvement. The Audit Committee monitors the implementation by management of these suggested improvements.

An audit report is prepared and issued by the internal auditor following the conclusion of each audit, including any management responses. These reports are presented to the Audit Committee and a summary of their reports is presented to the Board. The internal audit function maintains its independence by reporting directly to the Audit Committee, the members of which are all Non-Executive Directors.

3.9 Outsourcing

ECICL’s operational strategy is to use a combination of in-house, Markel and outsourced resource to enhance operational efficiency. ECICL’s Outsourcing Policy sets out its approach to meeting ECICL’s regulatory requirements for outsourcing. The operation of outsourcing arrangements is reviewed by management on a regular basis. A function or activity is viewed as “critical” or “important” if without it ECICL could not deliver services to policyholders. Areas where critical services are outsourced are listed below.

Outsourced Activity	Jurisdiction
IT trading platform	UK
Delegated Underwriting	UK
Claims Handling	UK

Following the sale of ECICL to MCH, certain services are provided to ECICL on an intergroup basis. These include risk management, compliance, internal audit, human relations, actuarial, and payroll. All of these services are based in the UK.

3.10 Adequacy of Systems of Governance

The Board of ECICL believes that the systems of governance are fit for purpose to deliver on their objectives within an agreed risk framework. ECICL is authorised by the PRA and regulated by the PRA and the Financial Conduct Authority (“FCA”) and complies with the corporate governance practices and principles expected by the regulators.

3.11 Any other information

The Directors do not consider that there is any other material information to disclose for ECICL.

4.0 Risk Profile

4.1 Overview

The Board of ECICL is responsible for prudent oversight of the Company, ensuring that it is conducted in accordance with sound business principles and within applicable law and regulation. This includes responsibility to set and monitor adherence to strategic risk objectives and risk appetite statements. The Board also ensures that measures are in place to provide effective identification, management and control of risk.

ECICL is committed to a structured and disciplined approach to risk management which considers strategy, process, people and technology. ECICL maintains a positive and open culture towards risk management throughout all levels of the organisation.

4.2 Capital Requirements

ECICL uses the Standard Formula to calculate its regulatory capital requirements. ECICL uses a mark-up of 35% on the SCR amount as the basis for calculating its economic capital.

ECICL is anticipated to hold capital in excess of this economic solvency level for 2019-2022 (the forecast to 2022 assumes that the ECICL Part VII transfer of business to MIICL does not complete in 2020).

ECICL ensures that it remains in continuous compliance with the requirement to ensure that it maintains a level of capital in excess of its regulatory SCR. The Board reviews the management accounts at each Board meeting to assess whether there is any deterioration in the financial results that may impact negatively on the capital position of ECICL and which may impact on the ability to meet its regulatory requirements.

4.3 Risk Mitigation

ECICL's risk register details the risks to which it is, or may be exposed. For each risk, there are a number of controls in place that are used to mitigate the risk and are monitored over time. Risk controls can be tools or techniques to proactively identify, manage and reduce risk and may involve the policies, standards, procedures and operations of ECICL. The risk register describes risk controls for each risk and identifies control ownership. The Risk Management function facilitates the process to enable the risk owners to identify risks, develop control activities to mitigate the risk within appetite and to carry out risk assessments. The Risk Management function assesses the effectiveness of the controls and works with control owners to address any control weakness.

Information on risk is presented to the Risk and Capital Committee. The Risk and Capital Committee is chaired by an independent Non-Executive Director and meets on a quarterly basis to monitor any significant change in the risks or controls.

4.4 Stress and Scenario Tests

A range of sensitivity tests is conducted for ECICL which allow for a better understanding of the key sensitivities for capital requirements. ECICL carries out stress and scenario testing as part of the ORSA process. As part of this process, ECICL also assesses explicit scenarios most likely to render its business model unviable, a process known as reverse stress testing. In order for ECICL's business model to become unviable, the Company would need to be unable to make recoveries from MIICL under the terms of the LPT and reinsurance agreement entered into in 2017 and 2018. The Board considers this to be a very remote possibility given the financial strength of MIICL and Markel.

In the context of this analysis, management concludes that ECICL has sufficient capital to meet its solvency needs and to achieve its business goals to within an acceptable level of confidence.

4.5 Overall Risk Profile

As at 31 December 2018, ECICL's risk profile expressed as percentage of its SCR, was:

	2018
Reserving Risk	0%
Underwriting Risk	0%
Market Risk	0%
Credit Risk	77%
Operational Risk	23%
	100%

4.6 Key Risk Areas

4.6.1 Reserving Risk

Reserving risk is defined as the risk of loss resulting from the inherent uncertainties as to the occurrence, amount and timing of insurance liabilities, focusing on risks that arise from the quantification of these liabilities.

Risk mitigation includes:

- The actuarial function analyses and projects historical claims development data and uses a number of actuarial techniques to both test and forecast claims provisions.
- ECICL purchased a LPT and quota share reinsurance from MIICL that ensures ECICL fully recovers any claims. Therefore, at the December 2017, ECICL had no reserve risk for the purpose of calculating the risk profile.

4.6.2 Underwriting Risk

Underwriting risk is defined as the risk of loss resulting from the inherent uncertainties as to the occurrence, amount and timing of insurance liabilities, focusing on risks that arise from the acceptance of business.

ECICL's underwriters and management consider underwriting risk at an individual contract level and also from a portfolio perspective where the risks assumed in similar classes of policies are aggregated and the exposure evaluated in light of historical portfolio experience and prospective factors.

Risk Mitigation includes:

- Premium rating, lapse ratios and new business premiums are tracked on a monthly basis. The current premium rating, as related to the historic claims records, inflation and insurance market trends, is also analysed to ensure adequate pricing.
- The delegation of underwriting authority to specific individuals, both internally and externally, is subject to regular reviews.
- ECICL purchased reinsurance from MIICL that ensures ECICL fully recovers any claims in respect of business written by ECICL. Therefore, from December 2017, ECICL had no underwriting risk for the purpose of calculating the risk profile.
- ECICL ceased writing new business and was placed into run-off from the 1 October 2018 and the renewal rights for the business were transferred to MIICL

4.6.3 Market Risk

Market risk refers to the risk of loss resulting from adverse financial market movements including interest rates or exchange rates. Risk mitigation includes:

- ECICL sold its fixed income investment portfolio in its entirety in 2017 and thus significantly reduced its exposure to movements in interest rates and movements in the investment valuations.
- ECICL operates in the United Kingdom and all of its business is transacted in pounds sterling. The functional currency of ECICL is pounds sterling and the presentational currency in which ECICL reports is pounds sterling and therefore ECICL does not have any exposure to movements in exchange rates.
- ECICL's policy concerning market risk ensures compliance with Solvency II "Prudent Person Principle" requirements.

4.6.4 Credit Risk

Credit risk relates to the risk of loss arising from the inability of a counterparty to fulfil its payment obligations. ECICL has exposure to credit risk, which is the risk that a counterparty will suffer a deterioration in solvency or be unable or unwilling to pay amounts in full when due.

Key areas of exposure to credit risk include:

- reinsurers' share of insurance liabilities.
- amounts due from insurance intermediaries and coverholders.

Risk Mitigation includes:

- ECICL purchased a LPT and quota share reinsurance from MIICL in December 2017. Under the terms of this reinsurance agreement, a full recovery would be made from MIICL in the event of ECICL failing to recover an amount due from any other party, including third party reinsurers.
- Amounts due for insurance contract holders and insurance intermediaries are monitored on a daily basis. Default in premium payments is greatly mitigated by the provision of instalment premium facilities for the majority of policyholders that are controlled via monthly direct debit arrangements.

4.6.5 Operational Risk

Operational risk is the risk that a financial loss or reputational damage may occur as a result of inadequate or failed internal processes, people and systems, or from external events.

This category includes items relating to business and strategic risk including, business processes, data security and cyber risk, outsourcing, financial crime, human resources, business continuity, treating customers fairly, regulation and litigation.

Risk Mitigation includes the review by management of metrics and benchmarks to monitor ECICL's operational risk profile, including the areas of business continuity, staff turnover and information technology.

4.7 Other Material Risks

4.7.1 Group Risk

Group risk is the risk that actions or events within one part of the Markel group adversely affect ECICL. ECICL considers it a strength to be part of a larger, experienced group with considerable financial resources and sound reputation. Overall, the Board considers that the fact that ECICL is part of a large group that has insurance experience mitigate the risks to which ECICL is exposed.

4.7.2 Liquidity risk

Liquidity risk arises where cash may not be available to pay obligations when due at a reasonable cost. ECICL is exposed to daily cash calls on its available cash resources, mostly for the settlement of claims.

ECICL monitors its cash flow requirements and ensures that it holds sufficient funds in the bank accounts to meet these cash flow requirements, including reviewing the cash flow requirements on a stressed basis.

4.7.3 Regulatory Risk

ECICL is required to comply with the requirements of the PRA and the FCA. Regulatory risk is the risk of loss owing to a breach of regulatory requirements or failure to respond to regulatory change.

Risk Mitigation includes ensuring that ECICL's compliance team monitors that regulatory reporting is performed with the agreed timeframe and ECICL is in compliance with its regulatory obligations.

4.7.4 Conduct Risk

Conduct risk is the risk of financial and/or service detriment which adversely affects the customer due to failings in the customer value chain.

ECICL's conduct objective is to build, maintain and enjoy long-term relationships with our customers whether it is directly or indirectly via a third party. This culture of partnership is fundamental to our dealings with our customers, and comes regardless of the complexity of the risk, the sophistication of the buyer, or the length of the supply chain to the end customer.

The conduct objective is owned by the ECICL Board and cascaded throughout the organisation. It is central in achieving delivery of the six Consumer Outcomes (as set out by the FCA), which are at the heart of our business. The Board aims to embed a culture, from the top down, where the conduct risk arising from the execution of the business plan and strategy is appropriately monitored and managed to ensure good outcomes for all our customers.

4.7.5 Strategic Risk

ECICL is aware of the dangers of following an inappropriate strategy or failing to implement a desired strategy.

One of the strengths of being part of an insurance group is the benefit of the oversight of Markel, which is able to bring the collective insurance experience of many decades to ensure that the strategy is sound. The Board consists of experienced directors with insurance expertise and broad industry knowledge.

4.8 Any Other Information

4.8.1 Expected profit included in future premiums ("EPIFP")

In addition to the above disclosures on the ECICL's risk management framework and its SCR by risk type, ECICL is also required to disclose the EPIFP as defined under Article 260 (2) of the Delegated Acts.

As at 31 December 2018, the EPIFP was nil because ECICL has fully reinsured all of its written premium.

4.8.2 Material change in Risk Profile during 2018

There has been a material change to the risk profile of ECICL during 2018.

From 1 October 2018, the Company ceased to write any new business and the renewal rights for the business were transferred to MIICL. The Company therefore entered run off during 2018 and will focus on ensuring the professional management of its claims liabilities to customers.

ECICL's main risk is now a counterparty risk with MIICL for the recovery of the amounts due under the LPT and the quota share reinsurance.

4.8.3 Off Balance Sheet risks

ECICL leases office space under an operating lease agreements. The future aggregate lease payments due under these agreements as at 31 December 2018 is £101,269. ECICL has not entered into any finance lease agreements and has no commitment payable under finance leases.

ECICL does not transfer risk to any special purpose risk vehicles.

5.0 Valuation for Solvency Purposes

5.1 Solvency II Valuation Basis

In accordance with Article 75 of the Solvency II Directive, assets and liabilities other than technical provision have been measured in accordance with the principles of an arms-length transaction between knowledgeable, willing parties using market consistent valuation methods. Technical Provision have been valued in accordance with Article 76 of the Solvency II Directive.

5.2 Solvency II Balance Sheet and UKGAAP Financial Statements

As at 31 December 2018	UK GAAP	Solvency II
Assets	£	£
Deferred Acquisition Costs	824,980	-
Deferred Tax	18,248	18,248
Reinsurance Recoverable	45,894,636	35,871,828
Insurance Receivables	262,834	262,834
Reinsurance Receivables	5,675,685	5,675,685
Cash and Cash Equivalents	4,866,615	4,866,615

Other Assets	-	-
Total Assets	57,542,998	46,695,210
Liabilities		
Technical Provisions	45,894,636	36,759,921
<i>Best Estimate Provision</i>		<i>36,561,893</i>
<i>Risk Margin</i>		<i>198,028</i>
Insurance Payables	103,170	103,170
Reinsurance Payables	632,006	632,006
Trade Payables	107,053	107,053
Other Liabilities	1,078,481	253,500
Total Liabilities	47,815,346	37,855,650
Excess of Assets over Liabilities	9,727,652	8,839,560

Overall, Own Funds on a Solvency II basis, are £8,839,560 and are £888,092 lower than the Net Assets on a UK GAAP basis. This is mainly due to reflecting the Risk Margin, £198,028 in the Solvency II numbers. SII Technical provisions are calculated on different metrics compared to UK GAAP resulting in a lower value by £9,134,715, this is offset by the 100% MIICL reinsurance programme and the reinsurance recoverables on a SII being lower by £10,022,808.

5.3 Assets

Deferred Acquisition Costs represents the proportion of acquisition costs incurred that corresponds to the unearned premiums provision at the reporting date. Deferred Acquisition Costs do not meet Solvency II valuation principles and are therefore not recognised on the Solvency II balance sheet.

Deferred Tax is recognised on timing differences at the reporting date. Timing differences are the differences between taxable profits and total comprehensive income and arise from the inclusion of income and expenses in tax assessments in periods different from those in which they are recognised in the Company's financial statements. The Company has not recognised any deferred tax asset on the difference between the net asset value on a UKGAAP basis and the Own Funds on a Solvency II basis due to the uncertainty surrounding the recovery of this asset.

Reinsurance Recoverable as reported in the financial statements comprise the reinsurers share of technical provisions. The treatment under Solvency II is discussed in the technical provisions section below.

Insurance Receivable as reported in the financial statements comprise premium receivable. Premium receivable constitutes future insurance cashflows under Solvency II and therefore form part of the Solvency II technical reserves.

Reinsurance Receivable as reported in the financial statements comprise reinsurance recoverable on paid claims less a provision for doubtful debts. Reinsurance recoverable constitutes future insurance cashflows under Solvency II and therefore form part of the Solvency II technical reserves.

Cash and Cash Equivalents represent cash deposits with maturities of less than three months. They are stated at the realisable cash value of the asset in accordance with Solvency II.

Other Assets comprise prepayments of expenses that cover more than one financial period.

5.4 Liabilities

Insurance Payables consists of insurance liabilities payable to intermediaries which are recognised when insurance contracts are entered into. These liabilities are reclassified under Solvency II and included in the calculation of Solvency II Technical Provisions.

Reinsurance Payables consists of reinsurance liabilities payable to reinsurers which are recognised when insurance contracts are entered into. These liabilities are reclassified under Solvency II and included in the calculation of Solvency II Technical Provisions.

Trade Payables consist mainly of liabilities in respect of insurance premium taxation.

Other Liabilities include deferred reinsurance acquisition costs that represents the proportion of the reinsurer's acquisition costs incurred that corresponds to the unearned premiums provision at the reporting date. Reinsurance acquisition costs do not meet Solvency II valuation principles and are therefore not recognised on the Solvency II balance sheet. In addition, other liabilities include amounts accrued for expenses that relate to 2017 but will be paid in future periods.

5.5 Technical Provisions

Article 76 of the Solvency II Directive defines the value of the Solvency II Technical provisions as the current amount insurance and reinsurance undertakings would have to pay if they were to transfer their insurance and reinsurance obligations immediately to another insurance or reinsurance undertaking.

Article 77 of the Solvency II Directive defines technical provisions as consisting of the sum of a best estimate provision and a risk margin.

5.5.1 Best Estimate Provision

The Best Estimate Provision is further clarified as “the probability weighted average of future cashflows, taking account of the time value of money (expected value of future cashflows) using the relevant risk free interest rate term structure. The cashflow projection used in the calculation of the Best Estimate shall be based upon up to date and credible information and

realistic assumptions and be performed using adequate, applicable and relevant actuarial and statistical methods. The cashflow projection used in the calculation of the Best Estimate shall take account of all the cash inflows and outflows required to settle the insurance and reinsurance obligations over the lifetime thereof. The Best Estimate shall be calculated gross, without deduction of the amounts recoverable from reinsurance contracts and special purpose vehicles. These amounts shall be calculated separately, in accordance with Article 81.” (Article 77.2 SII Directive).

5.5.2 Risk Margin

The Risk Margin is intended to represent the premium over the Best Estimate Technical Provisions that insurance or reinsurance undertakings would require in order to assume liability for the Technical Provisions transferred.

Under Article 77.5 of the Solvency II Directive the Risk Margin is defined as “the provision calculated by determining the cost of providing an amount of eligible own funds equal to the SCR necessary to support the insurance and reinsurance obligations over the lifetime thereof. The rate used in the determination of the cost of providing that amount of eligible own funds (Cost of Capital rate) shall be the same for all insurance and reinsurance undertakings and shall be reviewed periodically.”

The key implications of the above requirements for the Company are that:

- Solvency II Technical Provisions are valued at their Best Estimate (mean of the full range of possible outcomes).
- The full range of possible future outcomes should include low probability extreme events if considered appropriate.
- Technical Provisions valuations include future premium cash inflows and outflows. Under UKGAAP, future premiums are reflected as accrued premiums within insurance debtors and creditors.
- The change to a cashflow basis compared to earning basis of recognition of Technical Provisions removes the requirement for the non-monetary items under UKGAAP of Deferred Acquisition Costs and Unearned Premium Reserves.
- The cashflow projections are required to take account of all expenses incurred in servicing the insurance obligations, which introduces the requirement to recognise additional expense provisions as part of overall Technical Provisions.
- Under SII valuation requirements, future Technical Provision cashflows are discounted to their net present value using risk free rate yield curves prescribed by EIOPA.
- The Risk Margin replaces existing explicit or implicit margins over best estimate provisions and is required to be calculated using a standardised approach.

In addition, Solvency II requires contracts to be recognised on a legal obligation basis as opposed to an inception date basis. Accordingly, Technical Provisions recognised at December 31, 2017 include values for business not incepting until the following year. Under the legal obligation basis, Solvency II recognises that firms may have already committed to a contract in advance of the inception date.

5.5.3 Uncertainties with Valuation of Technical Provisions

The adequacy of the Best Estimate Technical Provisions is assessed by reference to projections of the ultimate development of claims in respect of each underwriting year. Management continually attempts to improve its loss estimation process by refining its ability to analyse loss development patterns, claims payments and other information, but many reasons remain for potential adverse development of estimated ultimate liabilities.

The process of estimating loss reserves is a difficult and complex exercise involving many variables and subjective judgements. As part of the reserving process, ECICL reviews historical data and considers the impact of various factors such as trends in claim frequency and severity, changes in operations, emerging economic and social trends, inflation and changes in regulatory and litigation environments. Significant delays occur in receiving notification of certain claims and a large measure of experience and judgement is involved in assessing outstanding liabilities, the ultimate cost of which cannot be known with certainty at the reporting date. The Best Estimate Technical Provisions are determined on the basis of information currently available. However, it is inherent in the nature of the business written that the ultimate liabilities may vary as a result of subsequent development. The two most critical assumptions as regards these claims provisions are that the past is a reasonable predictor of the likely level of claims development and that the models used for current business are fair reflections of the likely level of ultimate claims to be incurred. ECICL believes the process of evaluating past experience, adjusted for the effects of current developments and anticipated trends, is an appropriate basis for predicting future events. There is no precise method, however, for evaluating the impact of any significant factor on the adequacy of reserves, and actual results are likely to differ from original estimates. Management has considered environmental and latent injury claims and claims expenses in establishing ECICL's reserve for unpaid losses and loss adjustment expenses. ECICL continues to be advised of claims asserting injuries from hazardous materials affecting policies written in prior years. Coverage and claim settlement issues, such as determining that coverage exists and defining an occurrence, may cause the actual loss development to show more variation than the rest of the ECICL's book of business. Traditional reserving techniques cannot be used to estimate asbestos-related and environmental pollution claims and so the uncertainty about the ultimate cost of these types of claims is greater than the uncertainty relating to other classes of business.

ECICL believes it has made reasonable provisions for claims, although the gross ultimate liability may be more or less than held reserves. ECICL's Technical Provision are £Nil on a UK GAAP basis once the anticipated recoveries from the reinsurance contracts are reflected.

The Company has not applied any of the following transitional provisions or adjustments:

- matching adjustment referred to in Article 77b of Directive 2009/138/EC
- volatility adjustment referred to in Article 77d of Directive 2009/138/EC
- the transitional risk-free interest rate-term structure referred to Article 308c of Directive 2009/138/EC
- the transitional deduction referred to in Article 308d of Directive 2009/138/EC

5.6 Alternative Methods of Valuation

Not applicable for ECICL.

5.7 Any Other Information

The Directors do not consider that there is any other material information to disclose for ECICL.

6.0 Capital Management

6.1 Capital Management Policy

Capital Management is the collection of processes and activities undertaken to provide sufficient capital to enable the Company to meet its liabilities and ultimately ensure its survival, particularly in the case of losses arising from adverse events. ECICL considers items described as Own Funds in the Statement of Financial Position as being capital for the purpose of capital management.

ECICL has established standards for the efficient management of capital to meet the needs of the business and the return on capital requirements of shareholders. ECICL carries out a regular assessment of the Company's capital requirements together with a consideration of stress events and other scenarios that could impact on the level of capital required. In addition, ECICL ensures that it has a capital contingency plan in place should it require an unplanned capital injection.

ECICL produces a five year business plan as part of its capital management process. ECICL uses the Solvency II Standard Formula to calculate the SCR.

6.2 Own Funds

ECICL has £8,839,560 of Own Funds at 31 December 2018.

- £8,821,312 of the Own Funds is classed as Tier One for Solvency II purposes. This comprises Ordinary Share Capital of £9,100,000 less a Reconciliation Reserve of £278,688.
- Deferred Tax assets in the sum of £18,248 are classed as Tier 3 for the purpose of Own Funds.

ECICL had Own Funds of £7,142,955 at 31 December 2017. The movement in Own Funds is set out below:

£	2018	2017
Tier 1		
Ordinary Share Capital	9,100,000	9,100,000
Reconciliation Reserve	(278,688)	(1,979,272)
Total Tier 1	8,821,312	7,120,728
Tier 3		
Deferred Tax Asset	18,248	22,227
Total Own Funds	8,839,560	7,142,955

As noted above, the reinsurance arrangements with MIICL mean that ECICL now has no underwriting risk.

The Own Funds remain in excess of the Company's required regulatory capital designated by the PRA. The regulatory capital requirements are set out in the Solvency Capital Requirement and the Minimum Capital Requirement sections below.

6.3 Solvency Capital Requirement

In accordance with Article 100 of the Solvency II Directive, the SCR corresponds to the value at risk of basic own funds of an insurance or reinsurance undertaking subject to a confidence level of 99.5% over a one year time period.

The Financial Statements have been prepared on a non-going concern basis, purely as a result of the Company's intention to execute a Part VII transfer in the foreseeable future, and the Directors have no concerns over the Company's ability to settle claims. The company has sufficient assets to cover its liabilities and has no liquidity or capital issues. Further information can be found in section 2.9.

ECICL's SCR at 31 December 2018 is £2,531,337. The SCR at December 2017 was £3,833,815. The calculation is set out in the table below.

£	2018	2017
Market Risk	2,377	8,804
Counterparty Risk	1,946,587	2,946,875
Operational Risk	584,154	884,727
Non-Life Underwriting Risk	0	0
Total Undiversified Components	2,533,118	3,840,406
Diversification	(1,781)	(6,591)
Total SCR	2,531,337	3,833,815

At December 2018, counterparty risk represents the largest risk category and captures the risk of unpaid recoveries under the reinsurance agreement with MIICL.

The changes in the year are:

- Counterparty Risk has reduced significantly due to the Company being 100% fully reinsured by Markel and not writing any insurance business from 1 October 2018. During the year the Company closed a number of bank accounts which reduced the Counterparty Risk.
- Market Risk has reduced significantly due to the Company selling the investment portfolio.

6.4 Use of Simplified Calculations

ECICL has not used simplified calculations in applying the standard model.

6.5 Variations from Standard Model

ECICL has used the Standard Model to calculate its regulatory capital. There are no variations from the standard model.

6.6 Minimum Capital Requirement (“MCR”)

ECICL’s MCR at 31 December 2018 is £3,288,301. ECIC’s MCR at 31 December 2017 was £3,250,561.

The calculation of the MCR is in accordance with the requirement of Solvency II. Inputs comprise the net best estimate Solvency II technical provisions split by Solvency II classes of business together with net written premiums for the previous twelve months split by Solvency

II classes of business. Net written premiums are on a Solvency II basis and include movements on unaccepted premiums.

6.7 Non-compliance with the MCR or SCR

ECICL has maintained capital sufficient to meet its SCR and MCR throughout the period covered by this report.

6.8 Transitional Arrangements

The Solvency II regulations allow insurance companies and groups to take advantage of transitional arrangements in relation to meeting the solvency capital requirements.

ECICL did not take advantage of these transitional arrangements.

7.0 Other Information

The Directors of ECICL do not consider that there is any further information which should be disclosed regarding the capital management of the Company.
